

FACADE BLINDS

FM 200

HELLA Facade awning - The round design of the FM200 sets striking accents on the facade.

THE GEOMETRY OF THE PERFECT SUN PROTECTION

Geometric clearness and structural flexibility are strong points of HELLA's facade awnings; they are mounted directly to the facade whereby a certain distance to the windows must be maintained. Therefore, it is possible to perfectly shade large areas.

Various fastening options allow for easy installation in nearly every constructional situation.
