THE SELF-SUPPORTING PERGOLA
FOR THE NEW GENERATION

QUATTRO Q2

THE SELF-SUPPORTING PERGOLA FOR THE NEW GENERATION

The slope of the roof is masked by an aluminum mounting frame, which according to the size of the pergola, can be composed of 4 or 6 profiles, with a height ranging between 400 and 600 mm (in addition to the eaves' 70 mm).

By standard, the mounting frame has the same color as the pergola, though it is also possible to customize the color of each individual profile composing it.

Standard obscuring and waterproof PVC. Resistant to winds up to 100 km/h*. The slope of the roof is predetermined depending on the projections of the pergola.

Possibility of combining multiple modules, even in the two slopes arrangement. Available in its self-supporting version, or in its wall-mounted version.

**depending on sizes.*

- Patented system for side guides width movement.
- Patented dripless system.
- Maximum available size for single module
W. 5.000 x S. 4.500 mm or W. 4.500 x S. 5.000 mm with a mounting frame of 400 mm, W. 4.000 x S. 6.000 mm with a mounting frame of 600 mm.
- Coating available in 20 standard colors.
- Accessories on request: Led lights integrated in profiles, spotlights for pillars, profile color matching fabric color.
- Roll-up awnings Closer 115 with retained fabric within the side guides, thanks to a system of rods.
